Technologist with a background in **data engineering** and **analytics**, currently leading the engineering function and overall strategy at a digital agency, building AI-driven applications, client-facing web platforms, and scalable data infrastructure that serve both internal teams and external end users. I work cross-functionally with marketing, content, and operations to translate complex technical capabilities into practical solutions with measurable business impact.

PROFESSIONAL EXPERIENCES

Director of Engineering & Technology

Turfmapp, Thailand
JUL 2023 – Present

- Lead the engineering function and drive overall strategy across the agency, managing a team of 7-10 engineers while working closely with marketing, content, and operations to ensure AI and digital product delivery align with business objectives.
- Oversee agency-wide data security including access controls, key management, and data protection.
- Built AI-powered internal tools, including an intelligent knowledge base (RAG), achieving 90% retrieval accuracy and fine-tuned language models on proprietary data to improve content relevance by ~80%, enabling faster decision-making and reducing manual research across teams.
- Oversaw delivery of client-facing web platforms across desktop and mobile, integrating analytics and conversion tracking that drove a 30% engagement rate with 610K annual unique users.
- Automated AI-powered marketing workflows trained on proprietary datasets. This includes content planning, multilingual captions, AI-generated media, and a file management system organizing 200+ files into nested folder structures with automated QC validation, reducing campaign execution time by 80%.
- Architected analytics pipelines with built-in data validation, powering custom dashboards for market research, SEO, and social media insights, serving both internal stakeholders and external clients.

Data Analytics Engineer

Arity, Chicago
JAN 2020 – JUL 2023

- Built and optimized Spark-based pipelines on AWS (S3, EMR) for both batch and streaming data (Kafka, Flink, NiFi), processing 40M+ records daily across 160GB of data, reducing pipeline latency and improving reliability.
- Collaborated with Data Scientists to integrate models into production Scala data pipeline, serving around 120M route predictions daily.
- Created migration pipelines to restructure existing data storage (partitions, aggregations, schema updates), improving efficiency and scalability of downstream processing.
- Implemented automated data governance by building pipelines to remove PII data, processing over ~10M records daily, and ensuring compliance with CCPA/HIPAA, with zero violations during tenure.

Business Analytics Senior Consultant

Arity, Chicago
JAN 2017 – JAN 2020

- Designed and built monitoring dashboards using SQL, Python, and Tableau with data from HDFS, Oracle, and AWS S3, tracking millions of records daily to detect anomalies during migrations and SDK releases.
- Partnered with leadership, engineering, and data science teams to investigate ~5-10 anomalies per release cycle, reducing risks to downstream analytics and ensuring reliable data delivery.
- Led ongoing data quality control initiatives, delivering weekly reports across 10+ systems that improved visibility and enabled timely corrective actions.

Earlier Roles

Information Analyst Senior Consultant, Allstate Corp (2015–2017)
Service Engineer Consultant, Allstate Corp (2014–2015)

Product Analyst, Allstate NE Corp (2013–2014)
Information Analyst, Allstate Corp (2012–2013)

Business Analyst Intern, McDonald's Corp (2011–2011)

SKILLS & PROFICIENCIES

Data Engineering & Big Data

- Python, Scala, SQL, dbt, Airflow, NiFi, Spark (batch + streaming), Kafka, Flink
- AWS (S3, EMR), Hadoop, PostgreSQL
- Data governance and quality

Business Analytics

- Tableau, Jupyter Notebooks, Google Analytics
- Dashboard development, KPI design, data profiling, and reporting automation

DevOps, Tools & Orchestration

- Git, Jenkins, Shell scripting, Docker
- CI/CD pipelines, containerization, workflow orchestration, and monitoring

Leadership & Management

- Technical architecture, project management, stakeholder communication, and cross-functional team leadership
- Strategic planning, roadmap development, and delivery alignment

AI & Applied LLM

- LLM fine-tuning (Llama-2, LoRA/QLoRA), RAG (LlamaIndex), prompt engineering
- Vector databases (pgvector), AI agent design, Supabase

Creative & Applied Technology

- Media production, web design with AI-assisted workflows, and social analytics for campaigns
- Bridging creative strategy with data-driven insights for marketing and experiential design

EDUCATION

Bachelor of Science in Operations & Information Management
Northern Illinois University
August 2008 – May 2012, DeKalb, IL
Major & Minor Emphasis: Information Systems & Computer Science

LANGUAGES

American English (Native)
Thai (Native)
